In the Specification

Replace the paragraph on page 8 beginning at line 1 with the following:

The Display Database Manager 301 must limit the frequencies for the tracked words because, otherwise, the counts might exceed the storage capacity of a register on the device. The system must adjust to a user's change in usage. The invention's aging algorithm goes through the recorded frequencies and discounts older usage frequencies. Older usages do not reflect the user's current habits and therefore count for less.
